

AFRICA'S RESERVE PROTOCOL – EXECUTIVE BRIEF

MANSSA[®]

*Let Africa price, tokenize, and
capitalize its own assets — on its
own infrastructure, under its own
rules.*

01 – THE THESIS

The reserve protocol of Africa.

« Africa controls 30% of strategic minerals. It captures less than 5% of their tokenized financial value. MANSSA closes that gap. »

18%

of world population

<1%

of world compute

30 Bn

tokenized RWA, 2026

<5%

of African value captured

African value is priced on foreign infrastructure, governed by foreign frameworks, and yields flow to foreign treasuries. **This is not a market gap — it is a sovereignty lock.**

MANSSA[®] is the reserve protocol of Africa. It bridges African real-world assets, sovereign tokenization, decentralized governance and continental trust infrastructure — under a triple-jurisdiction architecture: **Swiss foundation (Stiftung)** for governance, regulated **Morocco** operations & Labs (targeting Bill 42.25 — Bank Al-Maghrib + AMMC), and per-asset **SPVs in the OHADA space.**

FIVE PRIMITIVES, ONE ECOSYSTEM

\$MANSSA Governance & utility asset · protocol flywheel · holder-primacy

\$MANSSA · sMANSSA

DAO On-chain arbitration · treasury allocation · protocol parameters

sMANSSA

RWA pillar Agricultural + gold tokenization via partner SPVs · 8 anti-ZiG principles

\$aAFRICA · \$gAFRICA

LaunchLab Africa-native DeFi · RWA tooling · on-chain identity · two cohorts / year

KETZAL Sovereign trust & compliance layer · bicameral oracle · continuous reserve attestation

02 – TOKENOMICS & GOVERNANCE

Fixed and enforceable.

\$MANSSA — ERC-20, Ethereum mainnet · **100,000,000 fixed**, non-inflationary · derivative **sMANSSA**.
 Governs the protocol and captures, through utility, the value of ecosystem activity — **not the reserve itself**. Neither a redeemable claim nor a currency.

 ■ 15 Team
 ■ 10 LaunchLab
 ■ 10 Ecosystem
 ■ 5 Solidarity

Governance · anti-ZiG — eight principles, non-negotiable

- 01 Not money** — RWA instruments are asset-backed certificates, never payment rails.
- 02 Issuer ≠ regulator** — structural separation, independent oversight.
- 03 Tier-1 audits** — quarterly, physical + accounting verification.
- 04 130–150% overcollat.** — on-chain verifiable margin.
- 05 Physical redemption** — right to withdraw the underlying.
- 06 Auto-arbitrage** — smart-contract stabilization.
- 07 Reserves on-chain** — daily updates, public read.
- 08 Infra ≠ issuer** — MANSSA never issues. SPVs do.

Holder-primacy

5% anti-whale

10% quorum

Security Council of 7

Dual tier-1 audits

03 – ARCHITECTURE & TRAJECTORY

Three entities. One trajectory.

ARCHITECTURE · THREE ENTITIES

- **CH** **Foundation (Stiftung)** — protocol governance, IP, DAO anchor. Ownerless, FATF-clean.
- **MA** **Labs + regulated entity** — targeting Bill 42.25 (Bank Al-Maghrib + AMMC). Issuance, LaunchLab, KETZAL, R&D.
- **SPV** **Per-asset SPV** — OHADA space. Bankruptcy-remote, sole issuer, risk bearer.

Operational desolidarization — distinct accounts, boards, contracts, premises, teams.

TREASURY · CARDINAL TARGET

10 Bn USD sovereign treasury

0.1% of 4–7 Tn tokenizable base

TIER	TREASURY	CENTRAL
P1	100 M	T+12
P3	1 Bn	T+36
P5	10 Bn	2031–2032

Roadmap

Pre-launch Constitutional corpus signed · dual audits · Security Council operational · Swiss Stiftung + Morocco Labs registered · pre-submission Bill 42.25

TGE + P1 TGE · bonding active · \$aAFRICA pilot · KETZAL oracle live · DAO operational · LaunchLab Cohort 1 — 100 M USD

Phase 2 \$gAFRICA live · KETZAL institutional services · Chainlink OCR bridge · Cohorts 2–4 — 1 Bn USD

Phase 3 KETZAL continental scale · DAO constitutional audit · P5 10 Bn USD (2031–2032)

// PRE-TGE — NON-WAIVABLE

No TGE before the full governance framework is operational, smart-contract dual audits are completed, the Security Council is legally mandated, and the constitutional corpus is signed.
