

# MANSSA®

AFRICA'S RESERVE PROTOCOL

*Let Africa price, tokenize, and capitalize its own assets — on its own infrastructure, under its own rules.*

## 01 — THE PROBLEM

**18%** of world population      **<1%** of world compute      **30 Bn** tokenized RWA, 2026

Africa generates a third of the world's strategic minerals yet captures **less than 5%** of their tokenized value. African value is priced on foreign infrastructure, under foreign frameworks. **A sovereignty lock — not a market gap.**

## 02 — FIVE PRIMITIVES, ONE ECOSYSTEM

- \$MANSSA** Governance & utility asset · protocol flywheel · holder-primacy  
\$MANSSA · sMANSSA
- DAO** On-chain arbitration · treasury allocation · parameters  
sMANSSA
- RWA pillar** Agricultural + gold tokenization via partner SPVs · 8 anti-ZiG principles  
\$aAFRICA · \$gAFRICA
- LaunchLab** Africa-native DeFi · RWA tooling · on-chain identity · two cohorts / year
- KETZAL** Sovereign trust & compliance layer · bicameral oracle · continuous reserve attestation

## 03 — \$MANSSA · GOVERNANCE & UTILITY

ERC-20, Ethereum mainnet · **100,000,000 fixed**, non-inflationary · derivative **sMANSSA**. Governs the protocol and captures, through utility, the value of ecosystem activity — **not the reserve itself**. Neither a redeemable claim nor a currency.

## 04 — THE FLYWHEEL

Treasury inflows → RWA acquisitions + KETZAL infrastructure → oracle revenues + RWA yields → deeper treasury → LaunchLab investments → portfolio returns → reinforce treasury. KETZAL services generate **B2B utility demand for \$MANSSA** — structural, recurring, decoupled from speculation.

### // COMPOUNDING

Value does not exit the ecosystem. It compounds.

05 — GOVERNANCE · ANTI-ZIG

## Eight principles, non-negotiable.

- 01 **Not money** — RWA instruments are asset-backed certificates, never payment rails.
- 02 **Issuer ≠ regulator** — structural separation, independent oversight.
- 03 **Tier-1 audits** — quarterly, physical + accounting verification.
- 04 **130–150% overcollat.** — on-chain verifiable margin.
- 05 **Physical redemption** — right to withdraw the underlying.
- 06 **Auto-arbitrage** — smart-contract stabilization, no manual intervention.
- 07 **Reserves on-chain** — daily updates, public read.
- 08 **Infra ≠ issuer** — MANSSA never issues. SPVs do.

Holder-primacy

1 token = 1 vote

5% anti-whale

10% quorum

48h / 168h timelock

Security Council of 7

Dual tier-1 audits

06 — ARCHITECTURE · THREE ENTITIES

- 🇨🇭 **CH Foundation (Stiftung)** — protocol governance, IP, DAO anchor. Ownerless, FATF-clean.
- 🇲🇦 **MA Labs + regulated entity** — targeting Bill 42.25 (Bank Al-Maghrib + AMMC). Issuance, LaunchLab, KETZAL, R&D.
- 🌐 **SPV Per-asset SPV** — OHADA space. Bankruptcy-remote, sole issuer, risk bearer.

**Operational desolidarization** — distinct accounts, boards, contracts, premises, teams.

08 — OPPOSABLE TO TGE

**Holders come first, always.** A robust DAO is a constrained DAO — protected by structural brakes, not promises.

**NO TGE BEFORE THE GOVERNANCE FRAMEWORK IS OPERATIONAL**

07 — TREASURY · CARDINAL TARGET

# 10 Bn

USD sovereign treasury  
· central horizon 2031–  
2032

# 0.1%

of Africa’s 4–7 Tn  
tokenizable RWA base

Non-negotiable. The minimum threshold for continental sovereign relevance — reached by becoming the infrastructure standard, not by capturing the continent.
